

PST Cable Rev.2

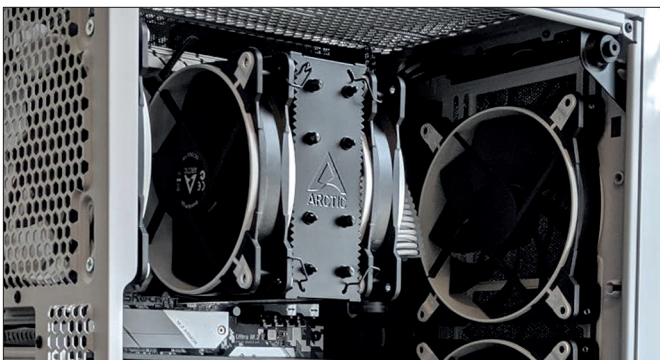

PWM PWM Sharing Cable for 4 Fans

- Connects up to 4 fans on just one fan-header
- Synchronises the fan speed based on your PWM settings

The PST Cable Rev. 2 allows you to control up to four case fans in one slot. It enables better cable management and, with its 70 cm length, reaches every fan mounting point - even in large tower housings.

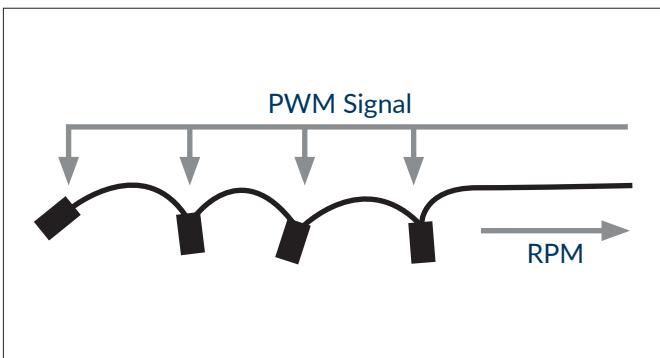

Technical Data

Connector	1 x 4-pin PWM Connector 4 x 4-pin PWM Socket (RPM signal on first socket only)
Cable length (overall)	700 mm
Cable length (to first socket)	400 mm
Cable length (between sockets)	100 mm
Colour	Black

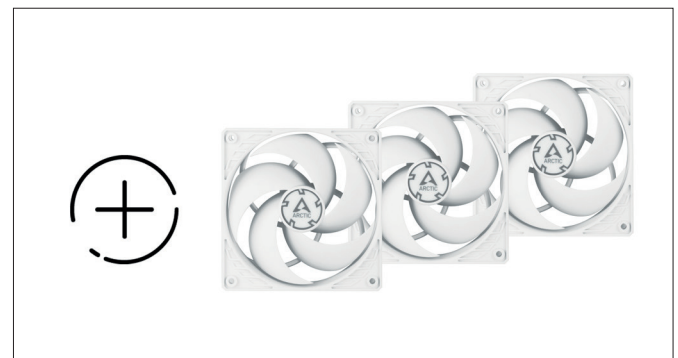

Improved Cable Management

With the 70 cm long PST Cable you can hide your cable management and still easily place fans in any position within your housing.

Synchronous fan control

Your set PWM signal is passed on synchronously to all fans connected to the PST Cable. The RPM of the first fan slot are read out and returned to your system.

Expand your ventilation

Even if you don't have enough fan headers on your mainboard, the PST Cable allows you to connect up to 4 case fans to a single header.
