

Nose and Mouth Mask

Quality-tested face mask

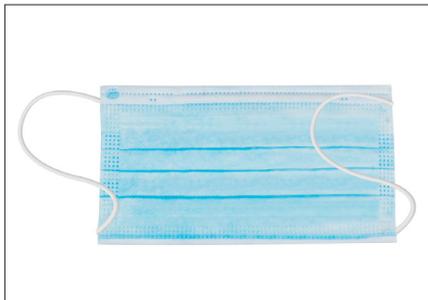

FILTRATION EFFICIENCY (BFE) 99%

TESTED IN GERMANY

30% LOWER BREATHING RESISTANCE

3x50

50x

TESTED IN GERMANY

High-quality, triple-layer face masks with elastic ear loops. Breathable and comfortable to wear. The mask can be individually adjusted thanks to the integrated nosepiece. Certified effective and hygienic, our face masks meet EN 14683 standards for type II medical masks.

MAIN FEATURES

- Quality tested in Germany
- 99% filter performance
- 30% less breathing resistance
- Microbiologically pure
- High quality triple-layer design
- Skin-friendly and toxin-free

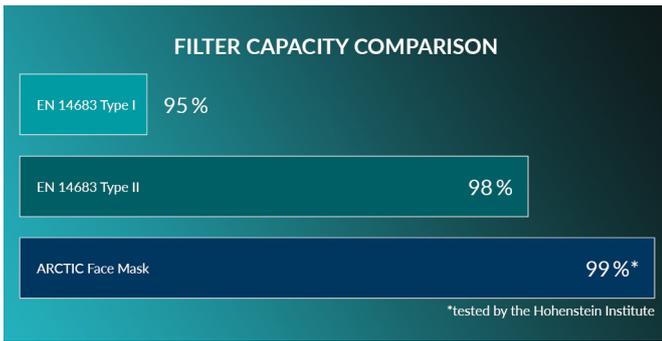

SPECIFICATION

Filtration Efficiency (BFE)	99 % Limit according to DIN EN 14683: Type I: ≥ 95 % Type II: ≥ 98 %
Breathing Resistance (Differential Pressure)	< 30 Pa/cm ² Limit according to DIN EN 14683: Type I & Type II: < 40 Pa/cm ²
Material	Straps: Thermoplastic Elastomer Nose clip: Polyethylene Filter/Shell: Polypropylene
Weight	2 g (per Mask)
Size	175 x 95 mm
Colour	Blue
Note	Non-sterile Disposable Product
Package	50 Pieces/Box

Nose and Mouth Mask

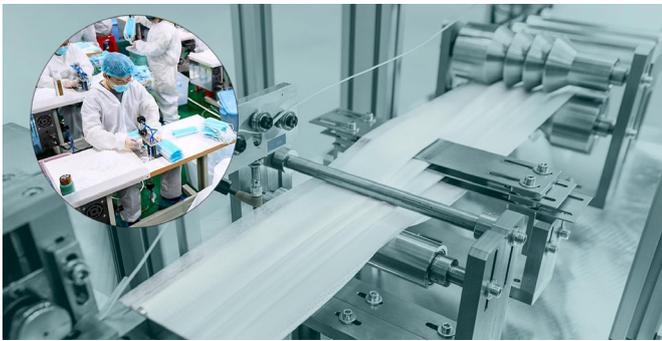

Quality-tested face mask

99% FILTER CAPACITY

With a filter performance (BFE) of 99%, we exceed the strict requirements of EN 14683 for type II medical masks. This means that our mask only lets through half as many germs in a stress test as is allowed for this standard.

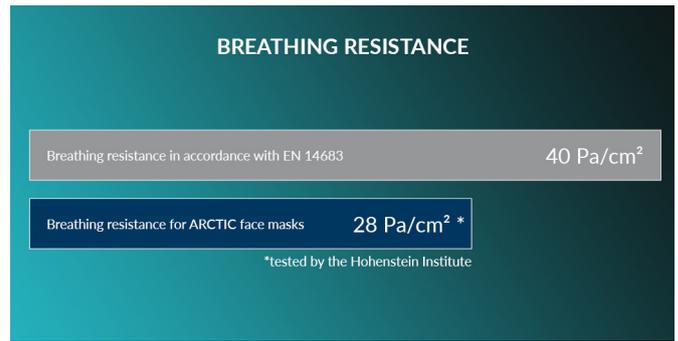

MICROBIOLOGICALLY PURE

Without exception, all materials were produced with our textile partner – in-house and under controlled conditions. This ensures both the materials and the workmanship meet the highest requirements for both quality and hygiene. This is reflected in a demonstrably high microbiological purity level.

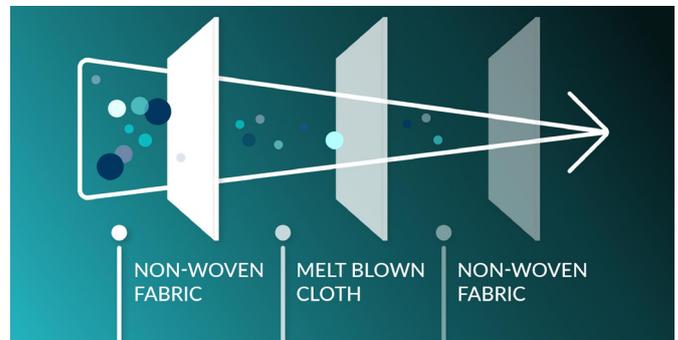

SKIN-FRIENDLY AND NON-TOXIC

Biocompatibility tests have shown that our masks are non-cytotoxic. The materials used are free from toxins and therefore harmless to the skin. This ensures that no skin irritation occurs, even after long periods of wear.

30% LESS BREATHING RESISTANCE

In addition to a stellar filter performance of 99%, the highly efficient filter material also enables a 30% lower breathing resistance. This significantly increases long-term comfort.

HIGH QUALITY 3-LAYER DESIGN

The mask consists of two outer layers of fleece, which are liquid-repellent and particularly kind to the skin. ARCTIC uses a fine meltblown fabric as the middle layer, which is particularly suitable as a filter fabric due to its fine structure. This 3-layer design also makes it comfortable to wear, with a demonstrably high breathability.

QUALITY-TESTED

Not all masks are the same; the effectiveness of homemade fabric masks, for example, is uncertain. The ideal combination of comfort and security can only be offered by a quality-tested product. That's why we have had our face masks tested and certified by the German Hohenstein Institute for effectiveness and hygiene.
